

# IRRIFILTROS

Programmer for automatic control of filters cleaning, which works with batteries and with two-wire “latch” electro valves.

It has a screen and three keys which are used for configuration, consultation and programming.

The main characteristics of the unit are:

- Outputs for 6 filters or 5 filters plus a general output.
- Three inputs for malfunctions, flow detector or counter and differential pressure gauge.
- Independent cleaning time for each filter and pause between filters.
- Time or volume units between cleaning sequences.
- Manual cleaning start up and stopping.
- One 9 volt battery power supply.
- Low battery indicator (it needs to be replaced).
- Options:
  - Power supply with three 9 volt batteries.
  - 12 Vdc power supply.

Irrifiltros is compliant with all the norms defined by the CE.

The products created by Progres enjoy a 2 year warranty against all manufacturing defects.
